SUMMARY

Senior Platform & Integration Engineer with 8+ years building systems across the full stack — from Kubernetes networking and workflow orchestration to data pipelines and ML serving infrastructure. CKA and CKAD certified. I move between application, platform, and data layers with equal comfort, and I take end-to-end ownership of what I build. Strong communicator; comfortable driving architectural decisions and presenting to stakeholders.

TECHNICAL SKILLS

Deep: Python, Kubernetes, GitLab CI/CD, Ansible, FastAPI, Django REST Framework, PostgreSQL

Solid: Terraform, Helm, Kustomize, Argo Events/Workflows, Prometheus, Grafana, ELK, RabbitMQ, Azure, Docker

Working knowledge: Go/Kubebuilder, OVN-Kubernetes, MetalLB (BGP), Tanium, KubeRay, LanceDB, SvelteKit

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) · Certified Kubernetes Application Developer (CKAD)

EXPERIENCE

Devoteam Amsterdam, Netherlands

Senior Consultant Jan 2026 – Present

Kyndryl – Integration Engineer Apr 2026 – Present

- Embedded across delivery teams building a modular architecture for portable, edge-deployable data centers; debugged Kubernetes networking (OVN-Kubernetes), deployed Tanium security services, reviewed GitLab CI/CD pipelines, and drove architectural documentation to reduce delivery overhead.
- Designed and built an end-to-end automated OS image security scanning platform from scratch: Argo Events and Argo Workflows on K3s, ephemeral VM provisioning via Nutanix API, Tanium Comply for CIS/DISA STIG/CVE scanning, MinIO for artifact storage, and Jinja2-rendered HTML reports committed back to GitLab; fully containerized and locally testable via Docker Compose.
- **Tech:** Python, Argo Events/Workflows, K3s, Nutanix, Tanium, MinIO, GitLab CI/CD, OVN-Kubernetes

West Consulting Delft, Netherlands

Senior DevOps & Platform Consultant Jun 2021 – Sep 2025

City of Amsterdam – DevOps Engineer Sep 2023 – Sep 2025

- Refactored and scaled Django REST Framework services to bring the Amsterdam App backend to production.
- Deployed workloads to Azure with Kubernetes and Helm; integrated observability via Application Insights.
- Implemented SSO via Microsoft Entra ID (OIDC) for Django Admin and API endpoints.
- Led transition to rolling releases, enabling frequent, lower-risk deployments across environments.
- **Tech:** Python, Django REST Framework, Azure, Kubernetes, Helm, Entra ID, TimescaleDB

SSC-ICT (Ministry of Interior) – Software Engineer Sep 2025 – Dec 2025

- Part of the core team building an internal Cloud Service Platform for Dutch government ministries.
- Owned the SvelteKit frontend end-to-end while contributing across the stack to platform architecture and evolution.
- **Tech:** SvelteKit, FastAPI, Ansible, CouchDB, Kubernetes

Abel Installatie – System Engineer Sep 2022 – Jan 2025

- Solo-designed and built Invopro, a middleware system processing thousands of invoices/day into a legacy ERP (Odoo).
- Created an event-driven pipeline with RabbitMQ; managed deployment and operations with Ansible on Debian servers.
- Owned client communication, technical design, and ongoing maintenance end-to-end.
- **Tech:** Python, RabbitMQ, Ansible, PostgreSQL, LXD, Supervisor

City of Amsterdam – CTO Innovation Team

Amsterdam, Netherlands

Lead Developer

Sep 2018 – Jun 2021

- Led architecture, full-stack development, CI/CD, and stakeholder coordination for open-source ODK platform (odk.ai), detecting illegal waste near Amsterdam city bins.
- Built scalable microservices with FastAPI, RabbitMQ, and PostgreSQL; also built a digital identity prototype (EU DECODE programme) and presented at an EU conference in Turin.
- **Tech:** Python, FastAPI, VueJS, RabbitMQ, PostgreSQL, Kubernetes, Docker, GitLab

PROJECTS

LatentNL | *KubeRay, Kubernetes, FastAPI, LanceDB, Python*

Active

- Infrastructure specialist for a Dutch government-subsidized AI platform making every Dutch parcel searchable by development potential. Stack: KubeRay on Kubernetes for distributed compute, three embedding models (TabPFN, SatClip, Microsoft Harrier), LanceDB for vector storage, FastAPI for query serving, and a 4TB GIS data warehouse.

ADS-B Flight Tracker Operator | *Go, Kubebuilder, NATS, Kubernetes, Docker Hub*

- Kubernetes operator built with Kubebuilder that tracks planes via OpenSky Network API. Scanner and tracker workers communicate via NATS; operator auto-scales tracker pods based on queue pressure.

Homelab | *k3s, Fedora CoreOS, OVN-Kubernetes, MetalLB (BGP), VyOS, Proxmox, Terraform*

- Multi-node k3s cluster on Fedora CoreOS with OVN-Kubernetes CNI, MetalLB in BGP mode, and a VyOS router for upstream BGP peering – mirrors production-grade enterprise Kubernetes networking.

EDUCATION

Fontys Hogescholen

Eindhoven, Netherlands

Bachelor of Science, Software Engineering

2015 – 2019
